LUCAS HAY SPEARS: SINGLE SPEAR™

**SQUARE
OR
ROUND
LIFT THEM ALL WITH
LUCAS HAY SPEARS**

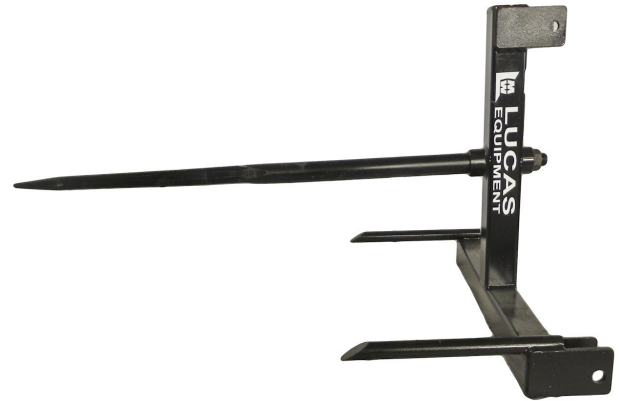

The Lucas Hay Spears Single Spear models come standard with 48” main solid steel spears that offer 44” of usable spear. In addition to two secondary spears that help provide the implement with a no-spin stabilizer system during the transportation of bales. All Single Spear models are backed with a 3” solid steel frame unlike the cheaper competitors on the market. These competitors use seconds for their steel frames which shortens the life of the implement and makes lifting heavier bales more dangerous for the operator. When lifting square or round bales of all heights and weight you deserve a solid steel hay implement that can make life around the farm more functional . Hook up the Single Spear on the front loader , a 3-Point Single Spear on the rear of tractor, and get back to work. Another project another Lucas solution.
