ONE TOOL | ONE PASS | ONE RESULT
FLAWLESSLY CONDITIONED GROUND

The Ground Hog Arena Tool was designed in 1996 by an avid arena owner, Raymond Lucas, who wasn't satisfied with the arena grooming tools that were on the market. Raymond desired to have one tool, that could groom the arena ground in one pass, and produce the same consistent result every pass, safe and flawlessly conditioning the ground. The Ground Hog Arena Tool enables arena owners to not only rework the surface with the unit's hydraulically operated ripper shanks but also fill in the holes that are dug by performance horses. This was accomplished with the unit's double grader blades, which allow for dirt to be carried by the unit and evenly distributed throughout the arena. Allowing for the unit's pegged finishing roller to flawlessly compact and finish the ground safely for the horse and rider. The Ground Hog is trusted by arena owners, barrel racers, rodeo associations, and event centers across North America. Including the granddaddy of all rodeos, the National Finals Rodeo (NFR). The Ground Hog is available in seven different versatile sizes and three colors (blue, black, green). See the recommended horsepower chart for to see what size of unit works best with your tractor and arena.
