LUCAS SCRAPER™

Does your driveway or jobsite need leveled out? Then the Lucas Scraper is your best solution. This unit was designed and manufactured to smooth, level, and to fill those inconvenient holes that somehow develop frequently. The Lucas Scraper works best on sand, gravel, and many other types of terrain. The unit's 8" tall double grader blades ensure that the unit will get the job done right by allowing even distribution of the terrain's material to be spread adequately throughout the project. This unit has been a proven solution for leveling both on the jobsite and at home, so skip the shovel and the rake. With four different size options there is a model available that will provide you with the solutions you seek. Another project another Lucas solution.
